

iFIX Integration

GE Digital

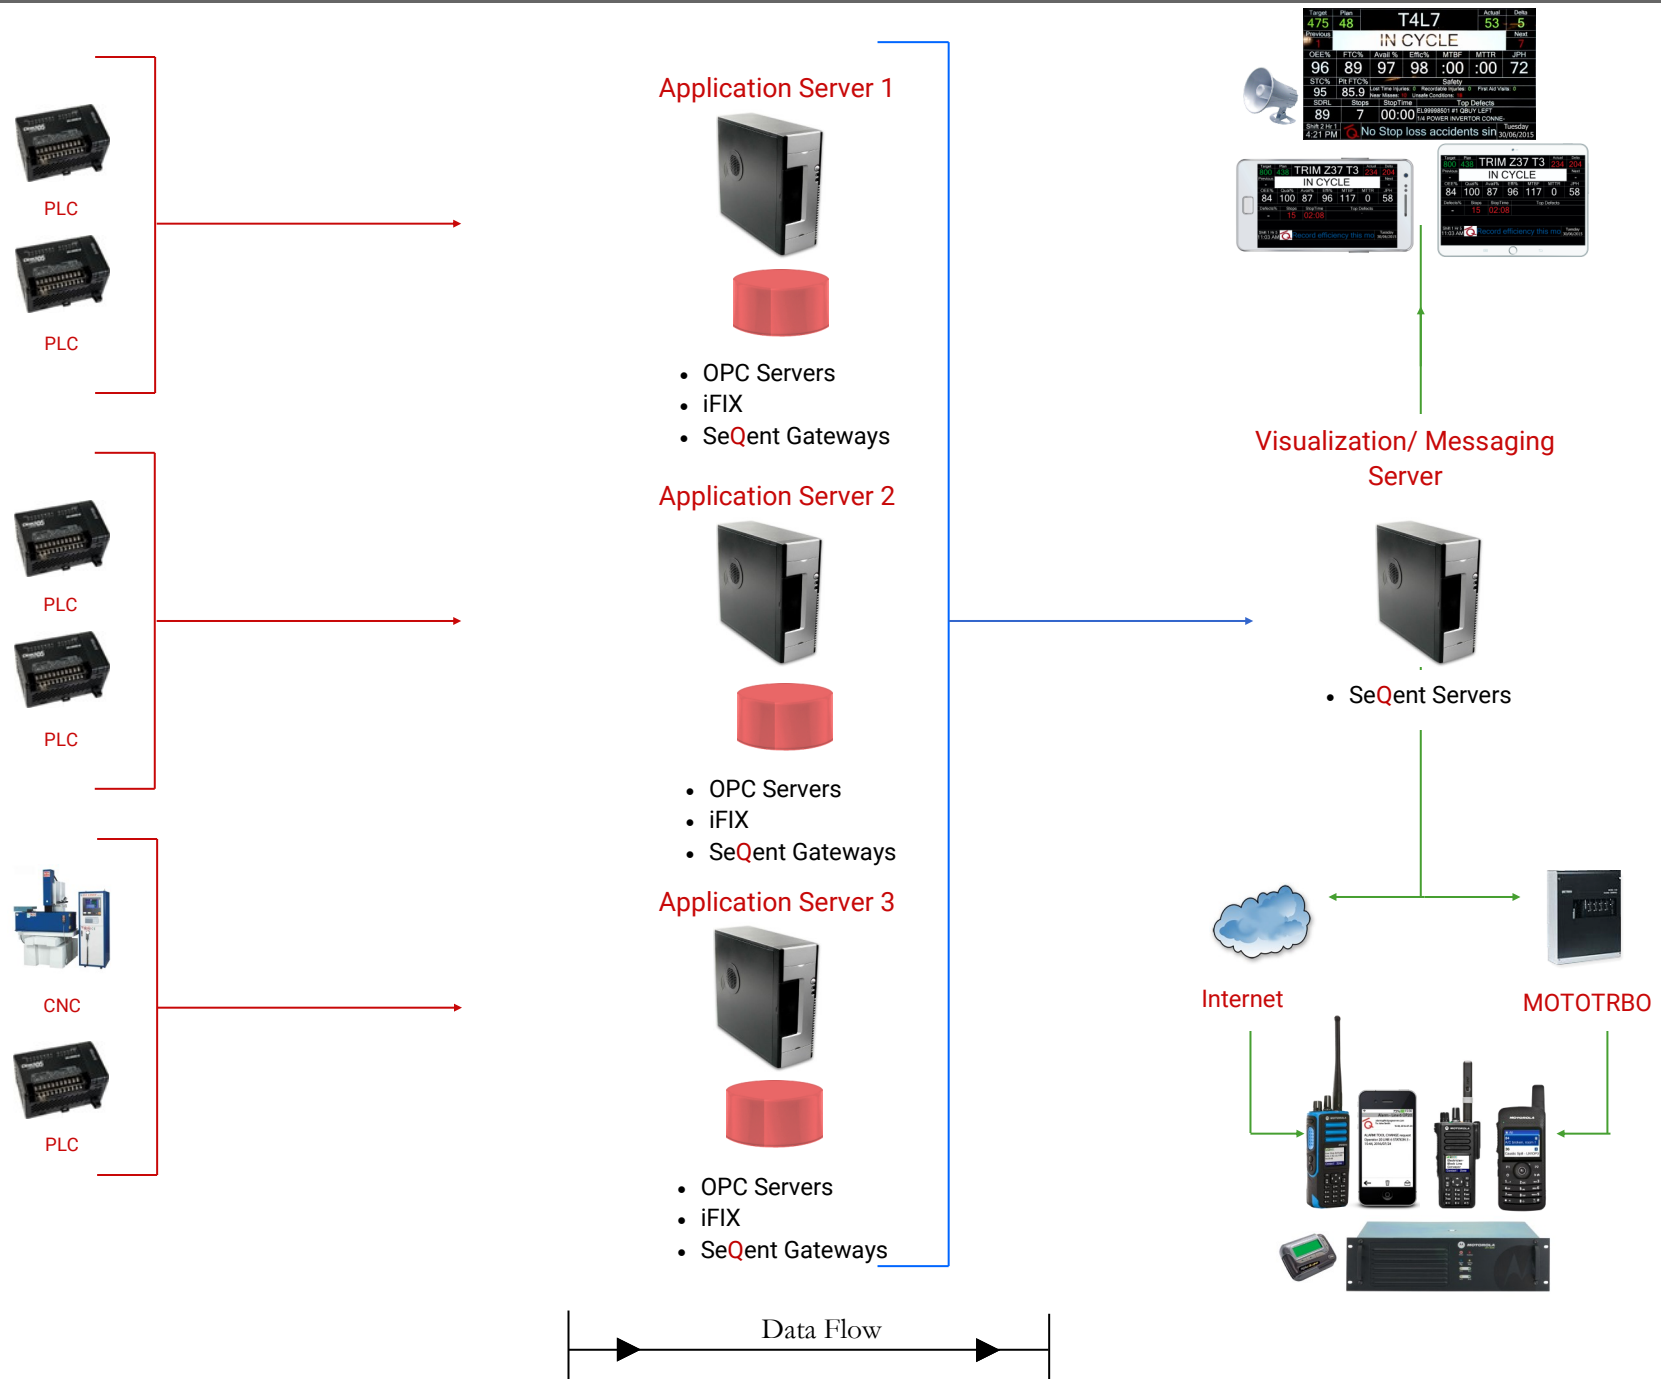

iFIX Integration

General Overview

SeQent's iFIX gateways monitor the alert queues of a iFIX project for alerts which match defined conditions. In addition, by using the SeQent OPC Gateways, iFIX data such as tags and calculated tags may also be monitored. Depending on the gateway selected, the actions may include:

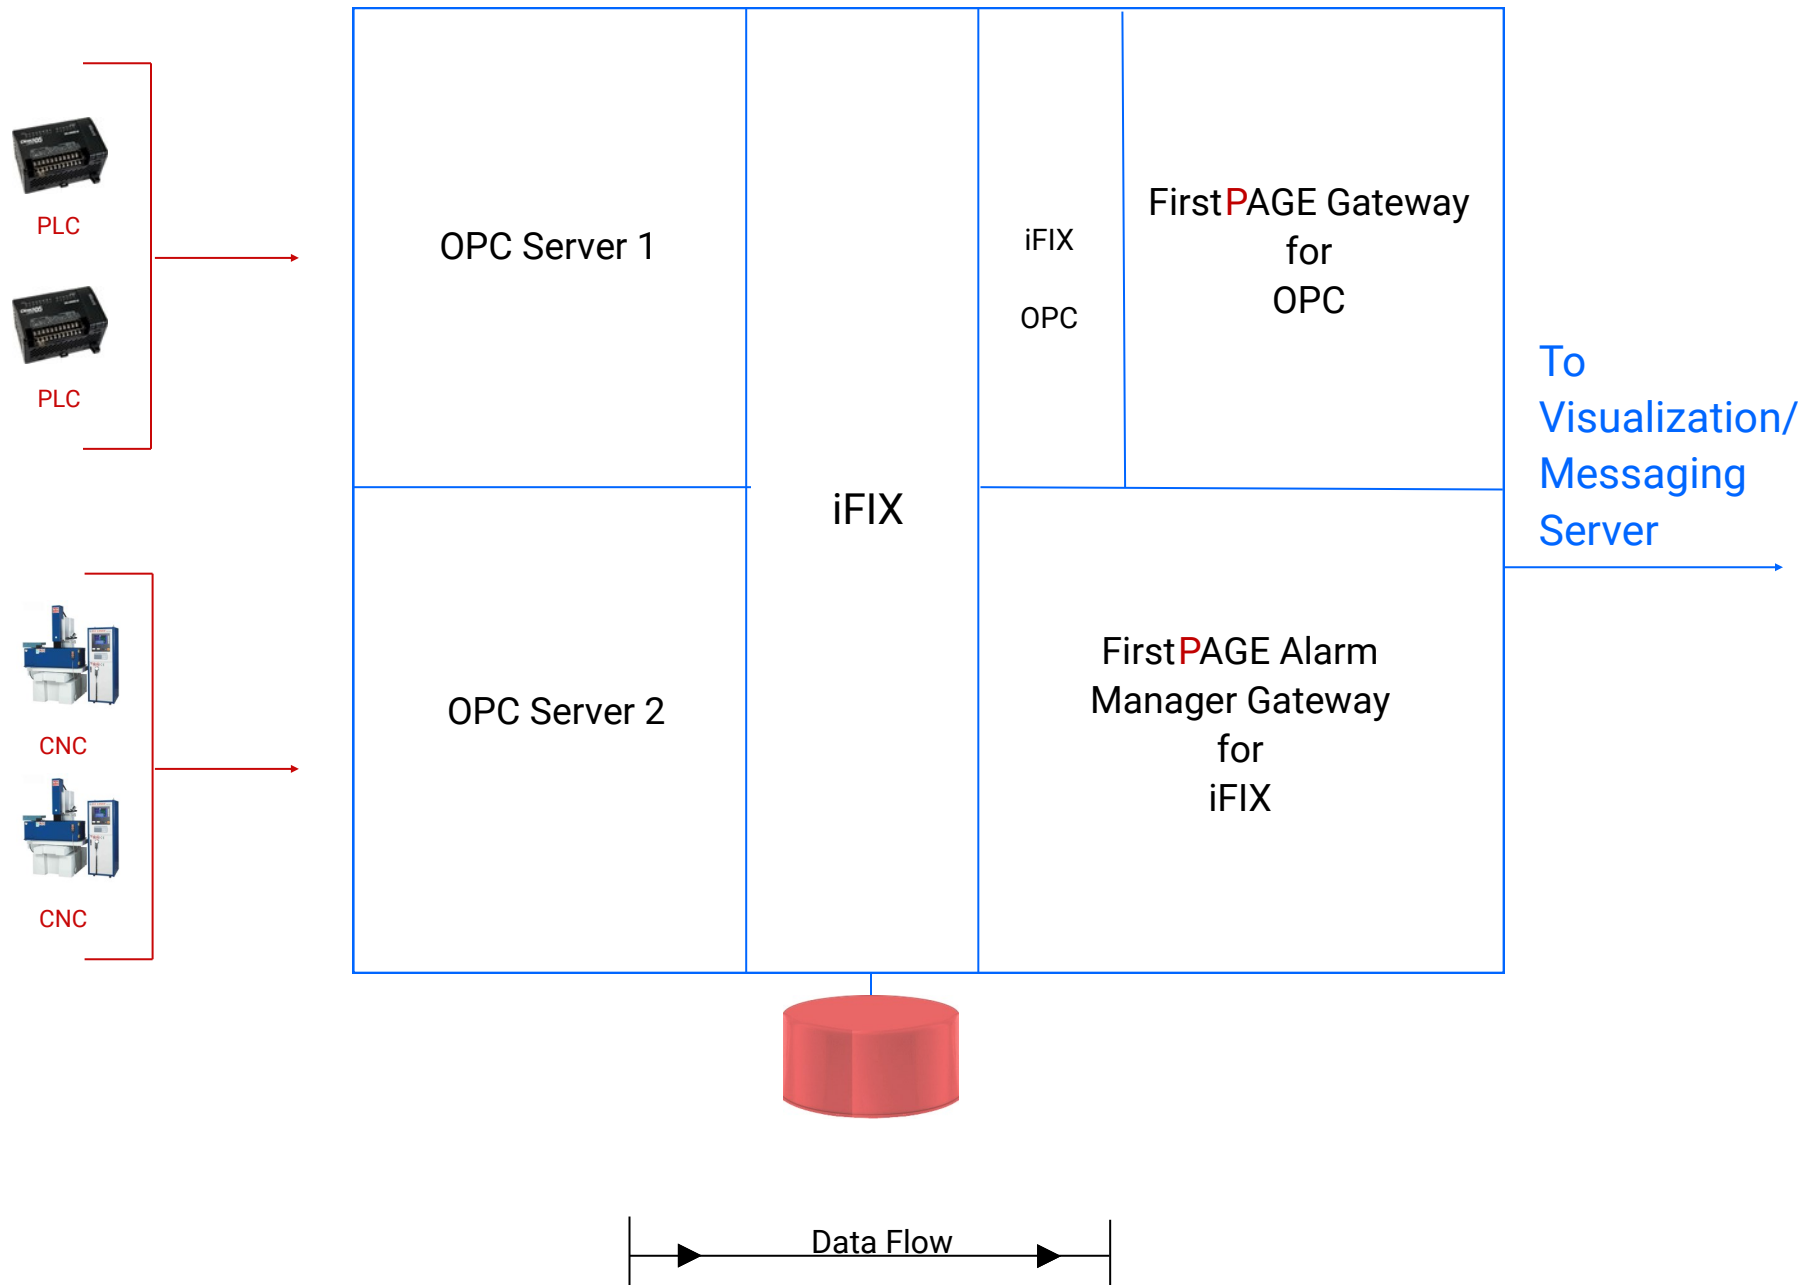

- Sending messages to wireless messaging destinations such as Motorola MOTOTRBO digital two-way radios, E-mail, pagers, smartphones and audible outputs.
- Raising alerts in our alarming engine for dispatch and escalation to wireless devices.
- SeQent's iFIX gateways support all versions of iFIX V6.1 or higher.
