

**Activplant  
Integration**

# Aptean Activplant Integration

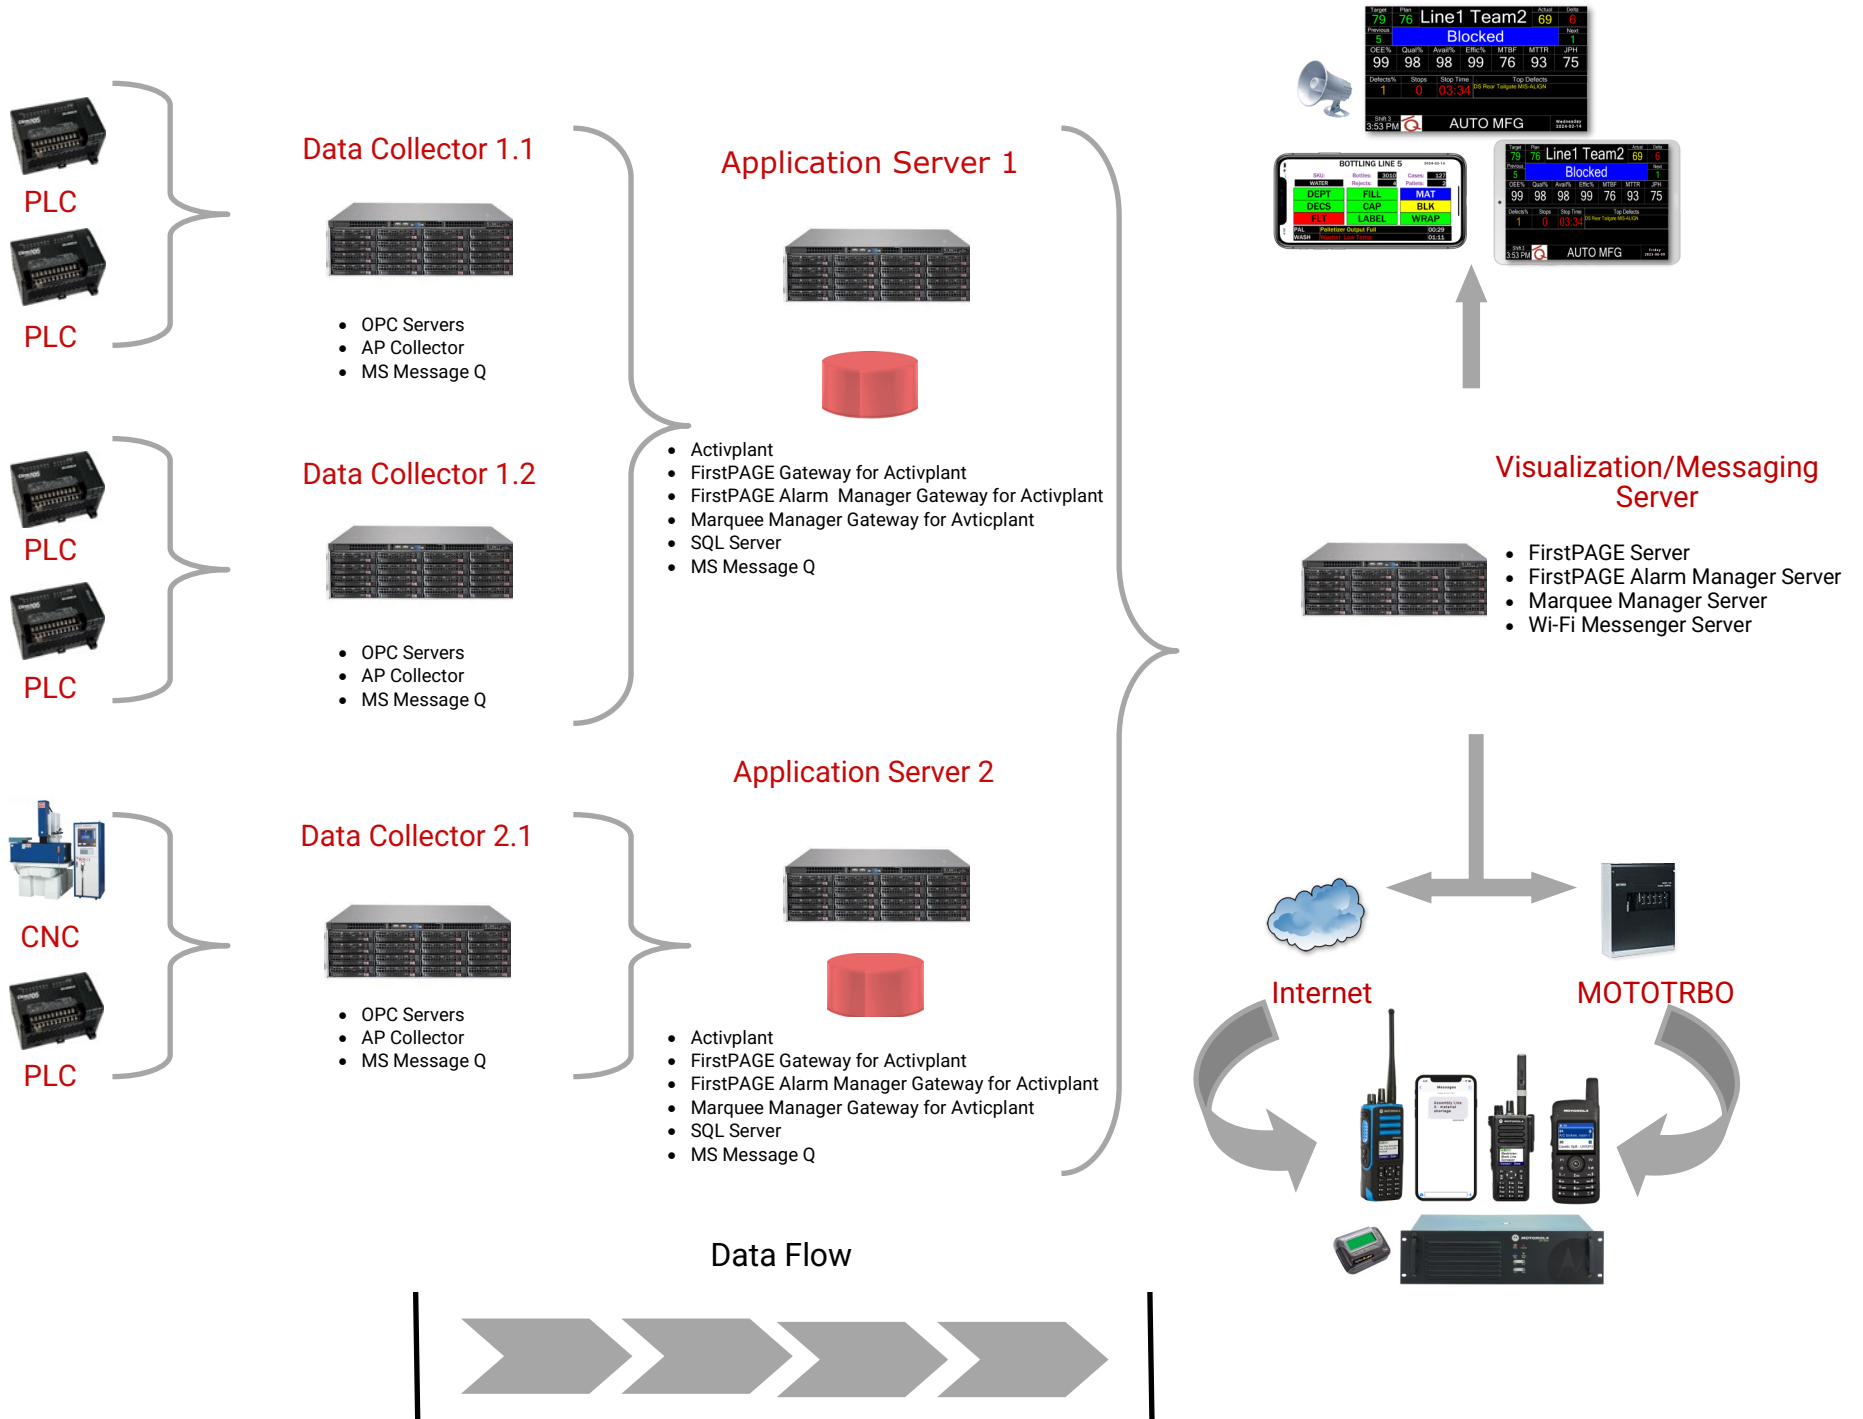

## Overview

SeQent's Activplant gateways monitor the specified incidents, categories, assets or groups for incidents which match the defined conditions. In addition, by using the SeQent OPC Gateways, Activplant data, such as accumulators and calculations, may also be monitored. Depending on the Gateway, selected the actions may include:

- FirstPAGE software offers a generic interface to a multitude of messaging platforms, enabling simplified communication and configuration. With support for many output protocols or platforms, including email, SMS, databases, voice and two-way radios, combined with various connectivity options (serial, modem, TCP/IP, databases), it allows for a vast combination of custom implementations.
- FirstPAGE Alarm Manager software makes it so if an alarm or event occurs, it will automatically escalate through a pre-defined hierarchy until acknowledged and will send key information to the right person at the right time on whatever communication device that is configured.
- Marquee Manager software monitors manufacturing environments and sends real-time, automated messages (Alarms, Events, KPIs, OEE) to visual and audible devices, including LED/LCD displays, smartphones, tablets, and sounder devices.

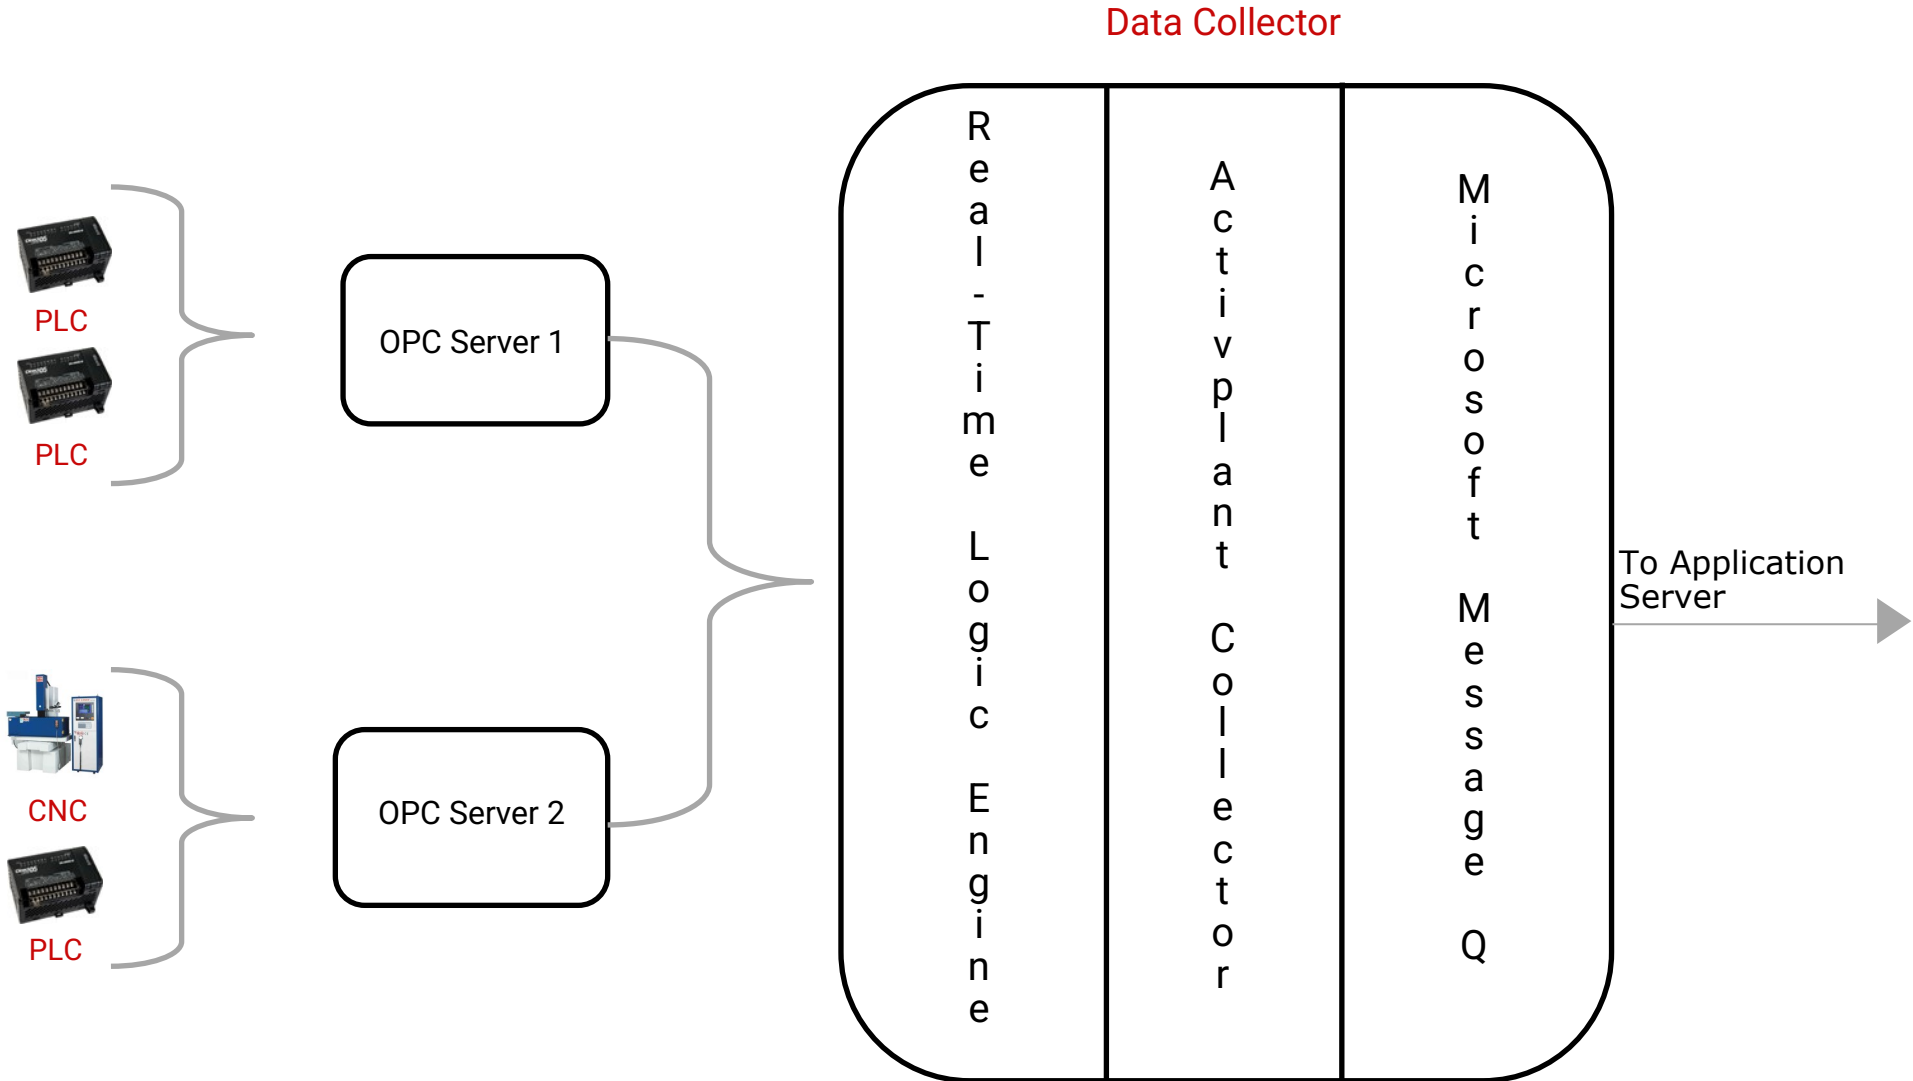

SeQent's Activplant Gateways support all versions of Activplant V7.8 or higher.
